"Newspapers Make A Difference"

HOW TO USE THIS RATE CARD

All rates given on this card are per column inch. In order to determine the cost of an ad, it is first necessary to decide on the size of the ad. For purposes of rates, the width of an ad is measured in column and the depth is measured in inches. An ad referred to as a 2x5 is actually 2 columns x 5". The width (example: 2 columns) is then multiplied by the depth (example: 5 inches) to determine the total column inches the ad will cover (example: 2x5=10 column inches). For the price of the ad, multiply the total column inches by the appropriate rate on the grid for the newspaper in which the ad is to run. The "open rate" is the rate for all advertising unless an advertising agreement has been signed. The *News-Leader* uses SAU column measurements.
